Three-nucleon forces and neutron-rich nuclei

A. Schwenk

TRIUMF, 4004 Wesbrook Mall, Vancouver, BC, V6T 2A3, Canada

I will discuss the role of three-nucleon forces in neutron-rich nuclei, ranging from helium halo nuclei, to the oxygen chain and to the impact on neutron matter and interactions that can be included in systematic energy-density-functional calculations.

This work is supported by the Natural Sciences and Engineering Research Council of Canada (NSERC). TRIUMF receives federal funding via a contribution agreement through the National Research Council (NRC) of Canada.
